Here are 4 sets of inorganic data from Richardson Flats. The data has not been reviewed for QA purposes. Nothing significant showed up in the organic analyses. (1 ppb or less of bis(2-ethylhexyl)phthalate showed up in a few samples. Toluene was seen at 3 ppb in Silver Creek & in 2 upgradient and 1 downgradient sample.) The phthalate and toluene are at very low levels and common contaminants attributed to contamars, leach procedures, etc.

I hope that this information is helpful - I will get a report to you ASAP.

Scott Keen
